7	NV-TMFX	Poeville Road	Full Suppression	12 mi NW of Reno, NV	3,010	0	98%	7/02/20	Type 3 Team NV Team 3	0	4	0	0	0	132	Maintain heavy equipment	Heavy recreation area
8	UT-SCS	Power Line	Full Suppression	3 mi W of Mona, UT	710	1	70%	7/04/20	Type 4 IC Jamie Duffy	0	2	0	0	0	54	None	High voltage power lines
9	UT-CCD	Wire Pass	Full Suppression	25 mi E of Kanab, UT	1,588	0	95%	7/01/20	Type 3 IC Nick Adamson	0	1	0	0	0	53	None	None
*** Notes of Significance ***																	
Fires highlighted in yellow have submitted a final ICS-209																	
	UT-RID	Rock Path	Full Suppression	15 m N of Milford, UT	20,941	0	100%	7/01/20	Type 3 Team Dameon Julander	0	2	0	1	0	61	None	None

## Evening Brief

Date: Wednesday July 1<sup>st</sup>, 2020

### Weather Summary

#### \*\*\* High Risk Friday for Dry Lightning AZ Strip and Southern UT \*\*\*

Warm, dry air returns to the Great Basin Thursday into the weekend as high pressure builds across the 4 Corners area. There could be lingering SW breezes 20-30 mph in central and southern portions of Nevada and Utah Thursday. Afterwards, winds should diminish, but subtropical moisture moving northward from New Mexico and eastern Arizona could push into parts of Southern UT and the AZ Strip by the end of the week or the weekend, bringing some lightning to areas where fuels are currently quite dry. We have issued **"High Risk" for Lightning** in some of the drier areas.

Otherwise cool in the north with some showers today across the Idaho Mountains and western Wyoming, then just a gradual warming and drying trend later in the week, but no significant fire threats there.

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 3	New Fires and Acres: 21 fires 81 acres; 2,526 acres large fire growth

---

### Fuels/Fire Potential

Recent showers/wetting rains have significantly increased fuel moisture across northern portions of Utah and Nevada. Further north into Idaho and Wyoming, fuels that were already several weeks behind normal, received multiple days of showers and high humidity, and have minimal large fire potential for this week.

South of the I-80 corridor, precipitation was much sparse and the brief effects of cooler temperatures and higher humidity that raised ERC's briefly will begin to wane starting today. Fuels south of the highway 50 corridor have remained critical, and could support ignition and large fire growth during windy afternoon periods, or with dry lightning.

Across lower elevations grasses are mostly cured below 5000 ft. in southern Idaho and below 6000 feet most other areas further south. Some new grass growth may be emerging in areas that have received over an inch of precipitation the past 3 weeks, namely northeast Nevada, far northern Utah and much of southern Idaho.

New live fuel moisture samples have begun and should be available in a few days. As of last sampling 2 weeks ago, most sagebrush moisture was still above 120% and not consistently spreading fire, except in some far southern areas.

## Resources:

### Aviation within the Great Basin

- 4 LATs, 2 Scoopers
- 19 SEATs
- 5 Type 1 Helicopters / 0 Avail.
- 7 Type 2 Helicopters / 1 Avail.
- 15 Type 3 Helicopters / 1 Avail.

### Crews Committed within the Great Basin

- 17 IHCs Committed / 2 MOB
- 27 T-2 IAs Committed / 8 MOB

## Current Incident Details

Today's Activity (from WFDSS):

Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. Of Origin Sage Grouse Habitat
